

## Obstetrics & Gynecology Science, on the runway

Congratulations are in order for the rebirth of our society's official journal as "Obstetrics & Gynecology Science." Moreover, I am greatly honored and privileged to have been granted an opportunity through the naming contest to make a small contribution in this historical transition.

When a child is born, the very first thing the parents do is name the child. Just as in placing a cornerstone in a building, naming bestows true meaning and hope to its existence. A name must incorporate unique character, values, expectations, and future perspective.

Why "Obstetrics & Gynecology Science"?

In this age of globalization, hope for our journal to make a leap to become international was expressed by removing the word "Korean." "Science" may sound somewhat basic to some of us but it actually has a comprehensive meaning. Originating from the Latin *scientia* meaning "knowledge," in olden days, reliable explanations about the phenomena of the universe were termed as science which, broadened to encompass the pursuit of knowledge. Therefore, the name "Obstetrics & Gynecology Science" contains the aspiration for our journal to be a top-quality Science Citation Information enlisted journal covering a various range of research findings bringing better insights to obstetrics and gynecology and related subjects.

With genuine commitment from the members of our society, I am confident that "Obstetrics & Gynecology Science" will serve as a worldwide arena where pursuit of knowledge in the fields of Obstetrics and Gynecology is shared and exchanged, thereby, providing an important basis to further improvement of women's health.
