Chondrotoxicity induced by  
intra-articular injection of corticosteroid  
in human articular cartilage

Directed by Professor Sung-Jae Kim

Doctoral Dissertation submitted to  
the Department of Medicine,  
the Graduate School of Yonsei University  
in partial fulfillment of the requirements for  
the degree of Doctor of Philosophy

Yun-Pei Kung

December 2010

This certifies that the Doctoral Dissertation  
of Yun Pei Kung is approved.

## ACKNOWLEDGEMENTS

Doctoral study is a harvest of positive influences from many supervisors that lend their personal efforts and expertise. Firstly, I would like to express my gratitude to my supervisor, Professor Sung-Jae Kim, for his encouragement and support throughout this research. His enthusiastic and rigorous approach to medical science helped me appreciate what it takes to be a good doctor and an exceptional researcher.

I am deeply indebted to Professor Jin Woo Lee and researcher Ho-Sun Jung for their extraordinary support throughout my investigations. I would also like to extend my appreciation to my committee members, Professor Nam-Hong Choi, Professor Jong-Chul Park and Professor Young-Bum Park for their valuable detailed comments and suggestions.

Further, I owe my deepest gratitude to my friends, Eric Shih and Jimmy Chang for their expertise and language consulting. I am blessed that I have the support of my wonderful family: my parents, my wife, Hai-Sun Lee and children, Michelle and Justin.

Finally, my deepest gratitude goes to God who governs the world among the individuals.

## <TABLE OF CONTENTS>

ABSTRACT .....	1
I. INTRODUCTION .....	4
II. MATERIALS AND METHODS .....	7
1. Articular chondrocyte isolation and cell culture .....	7
2. Cell proliferation assay .....	8
3. Analysis of apoptosis by flow cytometry .....	9
4. Cell cycle .....	9
5. Sulfated GAG assay .....	10
6. RT-PCR .....	10
7. Cell proliferation, cell cycle and sulphated GAG assay with IL-1 $\beta$ treatment .....	11
8. Statistical analysis .....	11

III. RESULTS	12
1. Effect of TA and DE on chondrocyte viability	13
2. Analysis of apoptosis and necrosis	15
3. Analysis of cell cycle	16
4. Analysis of GAG content	17
5. Effect of TA and DE on with IL-1 $\beta$ treated chondrocyte viability	19
6. Analysis of cell cycle of IL-1 $\beta$ treated chondrocyte	20
7. Analysis of GAG content of IL-1 $\beta$ treated chondrocyte	21
IV. DISCUSSION	22
V. CONCLUSION	28
REFERENCES	29
ABSTRACT (IN KOREAN)	36

## LIST OF FIGURES

Fig. 1. Chondrocytes phenotypes and specific marker gene expression. ....	12
Fig. 2. Effects of chondrocytes proliferation with 1 day, 2 days, 3 days of continuous exposure to TA and DE. ....	13
Fig. 3. Effects of chondrocytes proliferation with 1 day, 2 days, 3 days of continuous exposure to high concentration of filtered TA suspension and DE solution. ....	14
Fig. 4. Flow cytometric analysis of apoptosis. ....	15
Fig. 5. Cell cycle distribution measured by FACS Calibur. ....	16
Fig. 6. Effect of GAG secretion in chondrocyte. ....	17
Fig. 7. Induction of cyclooxygenase-2 by recombinant human IL-1 $\beta$ in human chondrocytes. ....	18
Fig. 8. Effects of IL-1 $\beta$ treated chondrocytes proliferation with 1 day, 2 days, 3 days of continuous exposure to TA and DE. ....	19

Fig. 9. Cell cycle distribution of IL-1 $\beta$  treated chondrocyte  
measured by FACS Calibur, 2 days after exposure of TA and DE.  
..... 20

Fig. 10. Effect of GAG secretion in 10ng/ml of IL-1 $\beta$  treated  
chondrocyte. .... 21

## LIST OF TABLES

Table 1. Concentration of triamcinolone acetate and dexamethasone  
disodium phosphate ..... 8

Table 2. Primer used for RT-PCR assay of primary chondrocyte
